THE IDEAL CHOICE WHEN YOU'RE LOW ON ROOF SPACE

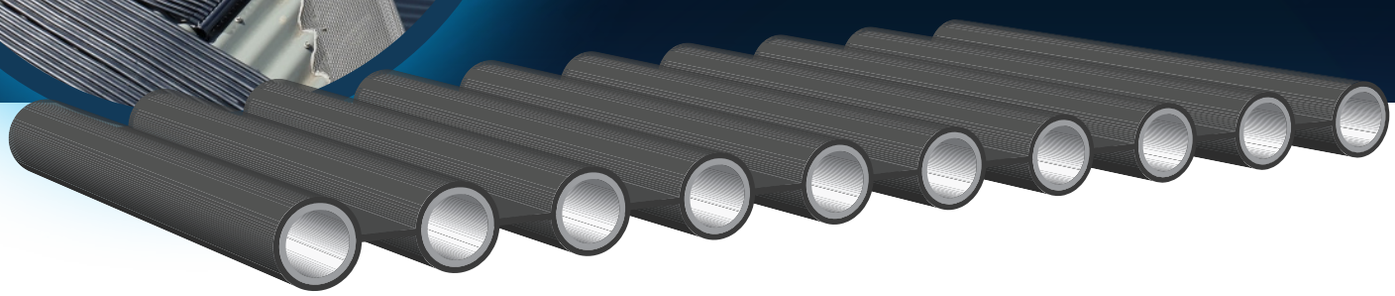

MultiLayered Nano Graphitic Technology

NanoTek Nano-Graphitic collector combines state of the art co-extrusion techniques and high tech Nano polymers.

The special matte black outer surface absorbs 20% more incidental solar radiation than standard solar collectors.

Featuring larger 8mm diameter tubes with Nano-Graphitic inner walls, the system captures sunlight 30% faster and increases water flow by 18%, maximising both energy output.

The result is a solar collector that is 40%* more efficient. More heating with significantly less coverage.

MaxBlack Outer Material

- Outer surface absorbs more heat
- 3.4L of water per square metre
- Maximum Ozone and UV resistance
- Maximum heat absorption from the outer matte skin results in increased heating efficiency

Larger 8mm Tubes

- 10 Tube collector with large 8mm x 8mm water channels
- Lower water flow rate for increased heat absorption
- Less back pressure

Patented Nano Graphitic Inner Layer

- Superior Heat Transfer
- Maximum chemical resistance
- Enhanced resistance to flex fatigue
- Maximum sealing retention to barbs

BOSS™ POOL HEATING

*For details and warranty conditions refer to our website: www.bosspoolheating.com.au
System must be installed with required components and in accordance with the recommendations and guidance published by Boss Pool Heating. Other conditions may apply. Contact Boss Pool Heating for more information.
