

TufFilta®

High Performance In-line Solar Filter

The TufFilta® is a high-performance inline filter that is responsible for filtering out debris and fibres from entering your solar pool heating system, or in-floor cleaning system.

The TufFilta® has a greater capacity for catching finer debris (such as leaves, grass and seeds) than the solar pumps filter basket. Over time, this fine debris can build up and cause damage to the solar collector tubing or in-floor cleaning system. Adding a TufFilta® is an inexpensive way to ensure optimum system performance and longevity.

Each TufFilta® comes with a 40mm Inline strainer canister and replaceable inner filter cartridge.

KEY FEATURES

- High performance, fine debris filter
- Ideal for solar pool heating or in-floor cleaning system
- Replaceable and cleanable inner filter cartridge
- Required by Australian Standards AS3634-1989
- Ensure optimum system performance and longevity
- Highly recommended for systems with a booster pump
- UV and impact resistant materials
- Australian Made by Boss Solar

PROTECT YOUR SYSTEM AND OPTIMISE ITS PERFORMANCE WITH A TUFFILTA®!
