

VacRel®

Vacuum Relief Valve

The VacRel® is a high-performance Vacuum Relief Valve for Solar Pool Heating. It has been designed to allow filtered air to easily enter the system when the pump switches off.

Without a VacRel® water within the system will struggle to return to the pool, causing significant negative pressure.

This can result in vacuum crush of the solar collector, and in some cases PVC pressure pipe. The VacRel® breaks with pressure, by allowing outgoing water to be replaced with filtered air, eliminating internal splits or leaks due to vacuum crush of the solar collector tubing.

KEY FEATURES

- Allows filtered air to enter the solar pool heating system
- Eliminates internal splits or leaks from vacuum crush
- Low break point (-6.8 mbar)
- Industry leading component
- Engineered to last
- Premium grade materials
- Suits 40mm UPVC fitting
- Australian Made by Boss Solar

ENSURE OPTIMUM SYSTEM PERFORMANCE AND LONGEVITY WITH A VACREL® VACUUM RELIEF VALVE
