# Install a Ready To Go Rigid Solar Pool Heating System and Enjoy Swimming for Longer!

Create the outdoor lifestyle you have always dreamed of with a Rigid Solar Pool Heating System. Built for Australia's tough conditions, the rigid panels are the most durable and affordable way to heat your pool.

The highly efficient solar collectors can increase the water temperature by more than 10°C, allowing you to enjoy up to six months of pool parties, relaxed swims and happy kids. Get the most out of your pool with a Ready To Go Rigid Solar Pool Heating System!

## Why Choose a Ready To Go Rigid Solar Kit?

Ready To Go Kits allow you to install a high performance, easy to install thermal solar pool heating system with the added benefits of a robust and durable rigid panel solution. The kits are fully customised to suit your requirements and supplied with a comprehensive plan and easy-to-follow instructions.

- High Heating Performance
- Fully Customised Kit
- Quick and Easy Installation
- No Specialist Skills or Tools
- Simple How-to Instructions
- Comprehensive Plan Provided

## Ready To Go Rigid Solar Benefits

COCKATOO WARRANTY

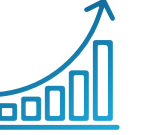

SUPERIOR DURABILITY & STRENGTH

HIGH EFFICIENCY PERFORMANCE

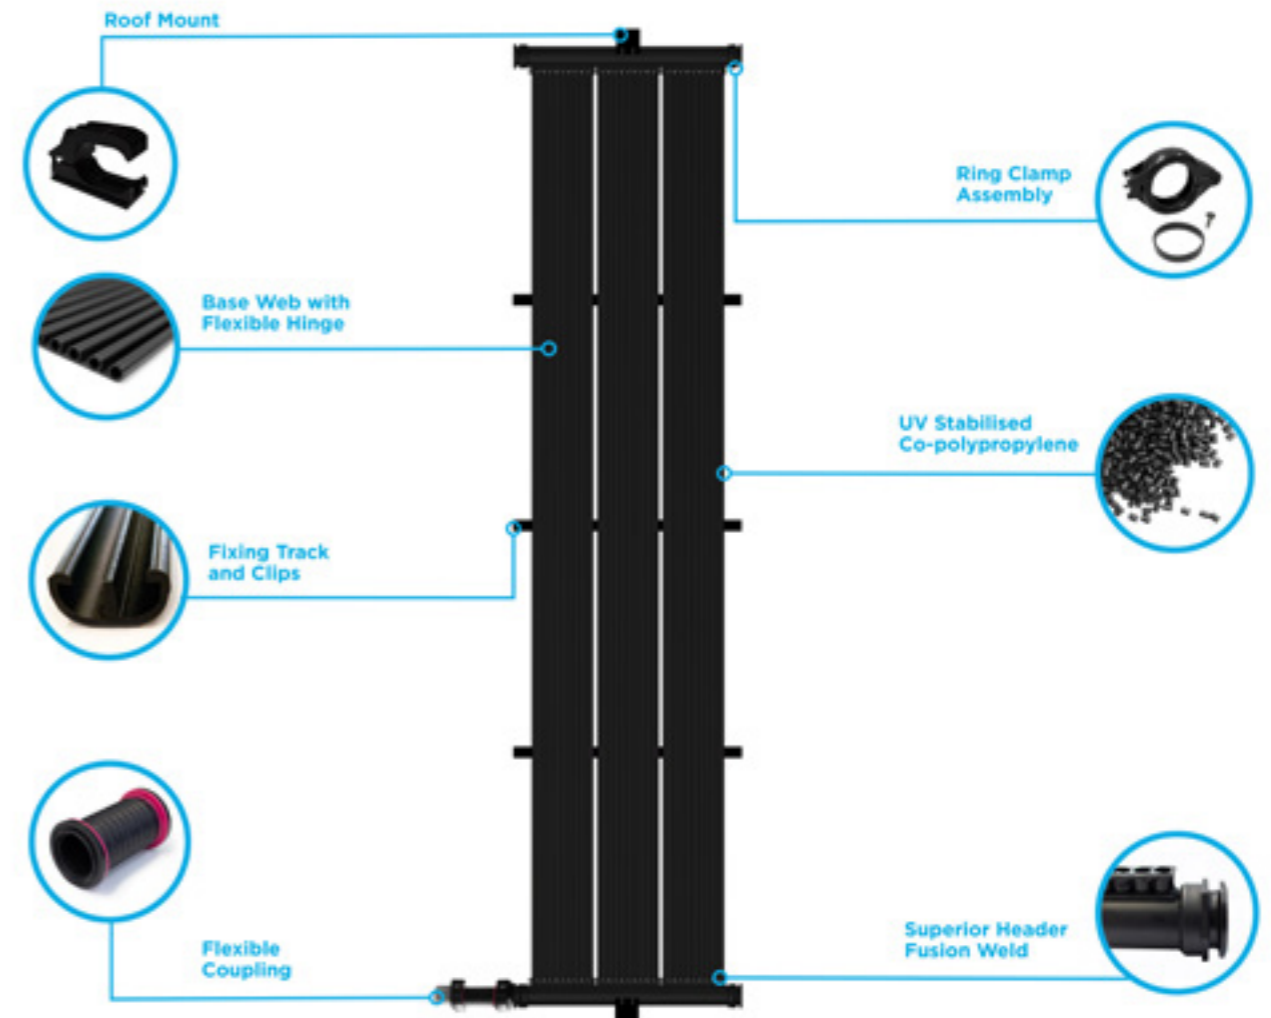

HAIL RESISTANT

PROFESSIONAL GRADE SYSTEM

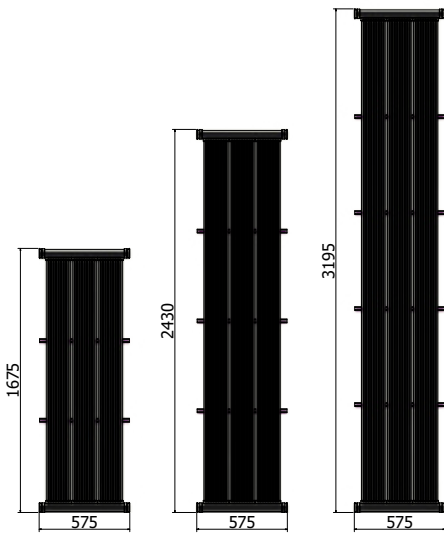

## Tough, Rigid Panels

Durable and Easy to Install!

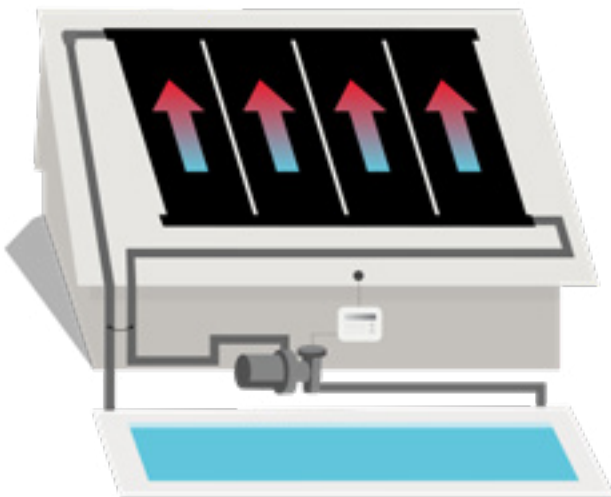

# Ready To Go Rigid Solar

## AVAILABLE PANEL RANGE

Ready To Go Rigid Solar Panel Sizes			
Part Number	PAR3/010	PAR3/014	PAR3/018
Panel Width, mm	575	575	575
Panel Length, mm	1675	2430	3195
Roof Coverage (m <sup>2</sup> )	0.96	1.39	1.83
Active Collector Area (m <sup>2</sup> )	0.7	1.1	1.5
Panel Weight (Wet) kgs	6.383	8.831	10.842
Rec. Flow Rate, litres /min/Panel	3.8	5.5	7.3

## How Does Solar Work?

Thermal Solar Pool Heating is a simple and effective form of pool heating. Pool water is pumped through a series of tubes, known as a solar collector which is installed on your home, shed or other nearby building. The solar collector absorbs the sun's free heat and transfers it to the pool water that is being pumped through it. This heated water is then returned back to the pool.

You can automate the heating process by installing a digital solar controller, which monitors the roof and pool temperatures and automatically switches the system on and off to ensure maximum heating efficiency.
